☎ + 33 06.02.39.05.32

I take AI systems from prototype to production — and I have done it where being wrong is expensive. PhD in machine learning, best paper at IDA 2023. Three things: **RAG, agents and LLM pipelines** taken from demo to production; **forecasting and time-series** put where a decision depends on the number; **self-hosted LLM systems** running inside your own perimeter. Model-agnostic, no vendor lock-in — you own and can audit what I build. Available 2–3 days a week for client work.

Work History

Independent AI/ML Consultant, 08/2025 - Current

TschorAI (French entity from 02/2026), Remote — US, then France

- Built and launched **three full applications solo**, AI agents as the build team: a deployed vision-LLM bot turning photos of handwritten notes into structured Markdown with LaTeX maths (two days); a Streamlit app ranking 1,160 French communes by hourly temperature forecast (three days); and a kanji-learning app, kick-off to live prototype in one day — yeswekanji.streamlit.app.
- Applied research for a US client (name withheld) on consistency models and neural operators for diffusion-based image generation, aimed at cutting sampling steps and training cost.

Co-founder, 11/2024 - Current

GENAU AI, Remote

- Built an in-house team of AI coding agents turning a single command into a deployed forecasting pipeline for a new market, data integration to dashboard, with verified hand-offs and approval gates.
- Stood up the venture's production platform from scratch — OVH compute, Railway database, Prefect orchestration, Argo CD / GitOps delivery, GCP, multi-tenant Streamlit dashboards.
- Led the technical build with a 5-person team; designed forecasting models outperforming incumbents by 30% on benchmarks.

Power Market ML Engineer & Quantitative Analyst (CIFRE), 09/2019 - 03/2024

BCM Energy (Planète Oui, now Elmy), Lyon

- Built day-ahead electricity price forecasting models improving predictive accuracy by 46%, plus model-driven trading strategies used daily by the desk.
- Ran a trading book alongside the desk, tied to the performance of my own models.
- Reverse-engineered the market clearing algorithm and embedded it inside the ML model; integrated 100+ variables from dozens of sources (ENTSO-E) and kept the models in production (Docker, Airflow, PostgreSQL, Grafana, CI).

Education

Ph.D. : Computer Science — CIFRE thesis with BCM Energy, 2020 - 2024

INSA Lyon & LIRIS-CNRS, Defended 01/2024

- Electricity price forecasting on the European day-ahead market: explainable AI, graph neural networks and differentiable optimization — including a novel differentiable dichotomy search solving an MIQP inside a neural network.
- 3 peer-reviewed papers and a doctoral thesis (Applied Energy 2022; IDA 2023; IEEE DSAA 2023); 300+ citations (329 as of September 2026); Frontier Prize, best paper, IDA 2023; jury of 8 experts.

Master's-level Engineering Degree : Computer Science, 09/2014 - 02/2019

INSA Rouen & The University of Queensland (07/2018 - 11/2018), Rouen & Brisbane

Skills

- LLM agents & orchestration
- RAG, evaluation & vision-LLM pipelines
- Production forecasting & time-series
- MLOps, explainable AI, Graph NNs
- Python, PyTorch, scikit-learn
- Anthropic SDK, MCP, Claude Code
- Prefect, Airflow, Docker, Argo CD
- GCP, AWS, OVH, PostgreSQL, Streamlit
